

TAMIRAT BEYENE

Full-Stack Developer

tamneg21@gmail.com · 0995344115 · github.com/tamirat-code · linkedin.com/in/tamneg · Gondar, Ethiopia

SUMMARY

Full-stack developer working primarily in the MERN stack, with Python/Django, PHP/LAMP, and Java also in the toolkit. I build complete, production-shaped systems — real-time boards, tiered billing, booking platforms — not isolated tutorial exercises. Currently completing a Computer Science degree at the University of Gondar (expected 2027) while building CollabFlow, a project-management SaaS with paid Stripe tiers and AI-assisted task features.

PROJECTS

CollabFlow — Full-Stack Project Management SaaS (flagship project)

[React](#) · [Vite](#) · [Node.js/Express](#) · [MongoDB](#) · [Socket.io](#) · [Stripe](#) · [OpenAI API](#) — github.com/tamirat-code/collabFlow

- Built a real-time Kanban board with Socket.io, including task comments and a live activity feed
- Implemented tiered Stripe billing (Free / Pro / Business), gating AI features to paid plans
- Integrated Google OAuth, email verification, and in-app + email notifications
- Added Cloudinary file attachments, including a fix for Amharic filename encoding issues
- Built AI-assisted task features (summarization, subtask generation, priority suggestions) via the OpenAI API
- Debugged systemic issues across the codebase: merge-conflict artifacts, a missing controller crashing ESM builds, and middleware/cookie bugs affecting logout handling

Rose Hotel — Hotel Management System

[React](#) · [Node.js/Express](#) · [MongoDB](#) · [JWT](#) · [Stripe](#) · [Nodemailer](#) — github.com/tamirat-code/rose-hotel

- Built a React admin dashboard (Recharts, React Router v6, Axios) alongside a customer-facing booking frontend using Stripe Elements
- Implemented JWT and Google OAuth authentication, and Nodemailer-based booking notifications
- Wrote interactive API documentation for the backend
- Handled a real production security incident: discovered an exposed .env file in git history, scrubbed it from repository history, and rotated all affected credentials

DukanTrack — Orders & Customer Management for Ethiopian Small Shops

[Django](#) · [Python](#) · [Tailwind CSS](#)

- Built models, migrations, views, forms, and authentication for a small-business orders tool
- A deliberate Django learning project, used to build backend fundamentals outside the MERN stack

Lost & Found Management System

[PHP](#) · [MySQL](#)

- Designed the system architecture and requirements independently, end to end
- Built a PHP/MySQL backend with a dedicated, permissioned database for item reporting and recovery

Business Card Maker — Desktop Application

[Java](#) · [JavaFX](#) · [FXML](#)

- Built a modular desktop app with a real-time design preview engine and custom CSS styling
- Implemented RGB color-conversion logic for accurate rendering output

SKILLS

Frontend	React, React Router, Tailwind CSS, JavaScript (ES6+)
Backend	Node.js, Express, Django, REST API design, PHP
Databases	MongoDB, MySQL

Integrations	Stripe, Google OAuth, Socket.io, Cloudinary, OpenAI API, Nodemailer
Other	Java/JavaFX, LAMP administration (Ubuntu), Cisco Packet Tracer, Git/GitHub

EDUCATION

University of Gondar — B.Sc. in Computer Science

September 2023 – Present (Expected 2027) · Gondar, Amhara, Ethiopia

Relevant coursework: Data Structures & Algorithms, Database Systems, Web Programming, Software Engineering, Microprocessors, Real-Time & Embedded Systems, Theory of Computation
